Screened Topsoil

The screened topsoil is an all-purpose growing medium that can be used for a garden bed, turf establishment, etc. Our screened topsoil is screened through a 3/4" screen. It is amended with 20% of O38, which is our processed 3/8" minus recycled green waste material. The O38:

- Contains lots of organic matter, which our typical clay-cased PA soils are lacking. The organic matter is a food source for beneficial microorganisms that live in the soil.
- Assists with water retention.
- Can improve nutrient exchange between the soil and the plant.

Guaranteed analysis

Active Ingredients:

Raw, unscreened topsoil.....80%
O38.....20%
